# **Software Documentation template**

***Release 0.0.***

**Raphael Dürscheid, based on Template by Dr. Peter**

**Sep 17, 2019**

## USAGE AND INSTALLATION

<b>1</b>	<b>Relevant Background Information and Pre-Requisites</b>	<b>3</b>
<b>2</b>	<b>Requirements Overview</b>	<b>5</b>
<b>3</b>	<b>TODO:</b>	<b>7</b>
	<b>Index</b>	<b>29</b>

---

**Todo:** Introduce your project and describe what its intended goal and use is.

---

## RELEVANT BACKGROUND INFORMATION AND PRE-REQUISITS

---

**Todo:** Describe what a potential user needs to be familiar with. What should they read and understand beforehand  
Describe what a developer needs to be familiar with to further understand the code.  
Link to relevant documents or create a new page and add them there.

---

## REQUIREMENTS OVERVIEW

The **software requirements** define the system from a blackbox/interfaces perspective. They are split into the following sections:

- **User Interfaces** - *User Interfaces*
- **Technical Interfaces** - *Technical Interfaces*
- **Runtime Interfaces and Constraints** - *Technical Constraints / Runtime Interface Requirements*

TODO:

---

**Todo:** Create a black box view of your software within its intended environment. Identify all neighboring systems and specify all logical business data that is exchanged with the system under development.

List of all (a-l-l) neighboring systems.

**Motivation.**

Understanding the information exchange with neighboring systems (i.e. all input flows and all output flows).

---

(The [original entry](#) is located in /home/docs/checkouts/readthedocs.org/user\_builds/roboy-sw-documentation-template/checkouts/lite/documentation/ScopeContext/0\_system\_scope\_and\_context.rst, line 4.)

---

**Todo:** Define what coding guideline they should use, if you differ from the ones below.

---

(The [original entry](#) is located in /home/docs/checkouts/readthedocs.org/user\_builds/roboy-sw-documentation-template/checkouts/lite/documentation/ScopeContext/1\_conventions.rst, line 5.)

---

**Todo:** Describe what constraints someone further developing this software should adhere to, and why. Should they not use tool x or operating system y... You can use the table as below, or just put a list.

---

(The [original entry](#) is located in /home/docs/checkouts/readthedocs.org/user\_builds/roboy-sw-documentation-template/checkouts/lite/documentation/ScopeContext/2\_architecture\_constraints.rst, line 4.)

---

**Todo:** List all technical constraints in this section. This category covers runtime interface requirements and constraints such as:

- Hard- and software infrastructure
  - Applied technologies - Operating systems - Middleware - Databases - Programming languages
- 

(The [original entry](#) is located in /home/docs/checkouts/readthedocs.org/user\_builds/roboy-sw-documentation-template/checkouts/lite/documentation/ScopeContext/2\_architecture\_constraints.rst, line 12.)

---

**Todo:** For all your interfaces, define their first 3 [levels of interoperability](#). You can use your doxygen documented source code to i.e. show all members of a class. Find more on the [Breathe Documentation](#)

---

(The [original entry](#) is located in /home/docs/checkouts/readthedocs.org/user\_builds/roboy-sw-documentation-template/checkouts/lite/documentation/ScopeContext/3\_technical\_interfaces.rst, line 8.)

---

---

**Todo:** If you have a user interacting with the finished system, and especially if you have a UI or GUI, describe how it can be used. A good way of doing this, is by building a

- state transition diagram aka the ‘Dynamic UI Behaviour’ and
- a mockup/picture of every screen the user can see - aka ‘Static UI’

Don’t overdo it...

---

(The [original entry](#) is located in /home/docs/checkouts/readthedocs.org/user\_builds/roboy-sw-documentation-template/checkouts/lite/documentation/ScopeContext/4\_user\_interface.rst, line 7.)

---

**Todo:** If you want to use it, keep track of decisions that someone further developing this software or using it in the future might want to know about. This might save them time or clarify expectations. You can put them as a list, or whatever.

*Things to consider:*

- What exactly is the challenge?
  - Why is it relevant for the architecture?
  - What consequences does the decision have?
  - Which constraints do you have to keep in mind?
  - What factors influence the decision?
  - Which assumption have you made?
  - How can you check those assumptions?
  - Which risks are you facing?
  - Which alternative options did you consider?
  - How do you judge each one?
  - Which alternatives are you excluding deliberately?
  - Who (if not you) has decided?
  - How has the decision been justified?
  - When did you decide?
- 

(The [original entry](#) is located in /home/docs/checkouts/readthedocs.org/user\_builds/roboy-sw-documentation-template/checkouts/lite/documentation/ScopeContext/5\_design\_decisions.rst, line 6.)

---

**Todo:** Describe the installation process step by step.

---

(The [original entry](#) is located in /home/docs/checkouts/readthedocs.org/user\_builds/roboy-sw-documentation-template/checkouts/lite/documentation/Usage/0\_installation.rst, line 4.)

---

**Todo:** How do you start the software after installation

---

(The [original entry](#) is located in /home/docs/checkouts/readthedocs.org/user\_builds/roboy-sw-documentation-template/checkouts/lite/documentation/Usage/1\_getting\_started.rst, line 4.)

---

---

**Todo:** Describe your solution strategy.

**Contents.**

A short summary and explanation of the fundamental solution ideas and strategies.

**Motivation.**

An architecture is often based upon some key solution ideas or strategies. These ideas should be familiar to everyone involved into the architecture.

**Form.**

Diagrams and / or text, as appropriate. Keep it short, i.e. 1 or 2 pages at most!

---

(The [original entry](#) is located in /home/docs/checkouts/readthedocs.org/user\_builds/roboy-sw-documentation-template/checkouts/lite/documentation/development/00\_solution\_strategy.rst, line 4.)

---

**Todo:** If you have any tests describe:

- Where the tests are kept.
  - How the tests are invoked.
  - What you can/need to test manually.
- 

(The [original entry](#) is located in /home/docs/checkouts/readthedocs.org/user\_builds/roboy-sw-documentation-template/checkouts/lite/documentation/development/05\_test\_strategy.rst, line 4.)

---

**Todo:** Inset a building block view:

- Static decomposition of the system into building blocks and the relationships thereof.
- Description of libraries and software used
- 

We specify the system based on the blackbox view from *UML System Context* by now considering it a whitebox and identifying the next layer of blackboxes inside it. We re-iterate this zoom-in until specific granularity is reached - 2 levels should be enough.

**Motivation.**

This is the most important view, that must be part of each architecture documentation. In building construction this would be the floor plan.

**Tool**

- Create diagrams as below.
- 

(The [original entry](#) is located in /home/docs/checkouts/readthedocs.org/user\_builds/roboy-sw-documentation-template/checkouts/lite/documentation/development/06\_building\_block\_view.rst, line 6.)

---

**Todo:**

- Define your groups using the **/defgroup** doxygen command
  - Add **@addtogroup** tags to doxygen blocks of components in code as described here: <http://www.stack.nl/~dimitri/doxygen/manual/grouping.html#modules>
-

- Adapt the doxygencall to match the group name
- 

(The [original entry](#) is located in /home/docs/checkouts/readthedocs.org/user\_builds/roboy-sw-documentation-template/checkouts/lite/documentation/development/06\_building\_block\_view.rst, line 44.)

---

**Todo:**

- Define your groups using the **/defgroup** doxygen command
  - Add **addtogroup** tags to doxygen blocks of components in code as described here: <http://www.stack.nl/~dimitri/doxygen/manual/grouping.html#modules>
  - Adapt the doxygencall to match the group name
- 

(The [original entry](#) is located in /home/docs/checkouts/readthedocs.org/user\_builds/roboy-sw-documentation-template/checkouts/lite/documentation/development/06\_building\_block\_view.rst, line 55.)

---

**Todo:** Add a runtime view of i.e. the startup of your code. This should help people understand how your code operates and where to look if something is not working.

**Contents.** alternative terms: - Dynamic view - Process view - Workflow view This view describes the behavior and interaction of the system's building blocks as runtime elements (processes, tasks, activities, threads, ...).

Select interesting runtime scenarios such as:

- How are the most important use cases executed by the architectural building blocks?
- Which instances of architectural building blocks are created at runtime and how are they started, controlled, and stopped.
- How do the system's components co-operate with external and pre-existing components?
- How is the system started (covering e.g. required start scripts, dependencies on external systems, databases, communications systems, etc.)?

**Note**

The main criterion for the choice of possible scenarios (sequences, workflows) is their **architectural relevancy**. It is **not** important to describe a large number of scenarios. You should rather document a representative selection.

Candidates are:

1. The top 3 – 5 use cases
2. System startup
3. The system's behavior on its most important external interfaces
4. The system's behavior in the most important error situations

**Motivation.**

Especially for object-oriented architectures it is not sufficient to specify the building blocks with their interfaces, but also how instances of building blocks interact during runtime.

**Form.**

Document the chosen scenarios using UML sequence, activity or communications diagrams. Enumerated lists are sometimes feasible.

Using object diagrams you can depict snapshots of existing runtime objects as well as instantiated relationships. The UML allows to distinguish between active and passive objects.

---

(The [original entry](#) is located in /home/docs/checkouts/readthedocs.org/user\_builds/roboy-sw-documentation-template/checkouts/lite/documentation/development/07\_runtime\_view.rst, line 6.)

---

**Todo:** Add a deployment diagram. **Contents.**

This view describes the environment within which the system is executed. It describes the geographic distribution of the system or the structure of the hardware components that execute the software. It documents workstations, processors, network topologies and channels, as well as other elements of the physical system environment.

**Motivation.**

Software is not much use without hardware. These models should enable the operator to properly install the software. You can separate this into different levels...

---

(The [original entry](#) is located in /home/docs/checkouts/readthedocs.org/user\_builds/roboy-sw-documentation-template/checkouts/lite/documentation/development/08\_deployment\_view.rst, line 6.)

---

**Todo:** List libraries you are using

---

(The [original entry](#) is located in /home/docs/checkouts/readthedocs.org/user\_builds/roboy-sw-documentation-template/checkouts/lite/documentation/development/9\_Libraries.rst, line 8.)

---

**Todo:** Introduce your project and describe what its intended goal and use is.

---

(The [original entry](#) is located in /home/docs/checkouts/readthedocs.org/user\_builds/roboy-sw-documentation-template/checkouts/lite/documentation/index.rst, line 10.)

---

**Todo:** Describe what a potential user needs to be familiar with. What should they read and understand beforehand

Describe what a developer needs to be familiar with to further understand the code.

Link to relevant documents or create a new page and add them there.

---

(The [original entry](#) is located in /home/docs/checkouts/readthedocs.org/user\_builds/roboy-sw-documentation-template/checkouts/lite/documentation/index.rst, line 19.)

Contents:

## 3.1 Installation

---

**Todo:** Describe the installation process step by step.

---

## 3.2 Getting started

---

**Todo:** How do you start the software after installation

---

## 3.3 Context

---

**Todo:** Create a black box view of your software within its intended environment. Identify all neighboring systems and specify all logical business data that is exchanged with the system under development.

List of all (a-l-l) neighboring systems.

**Motivation.**

Understanding the information exchange with neighboring systems (i.e. all input flows and all output flows).

---

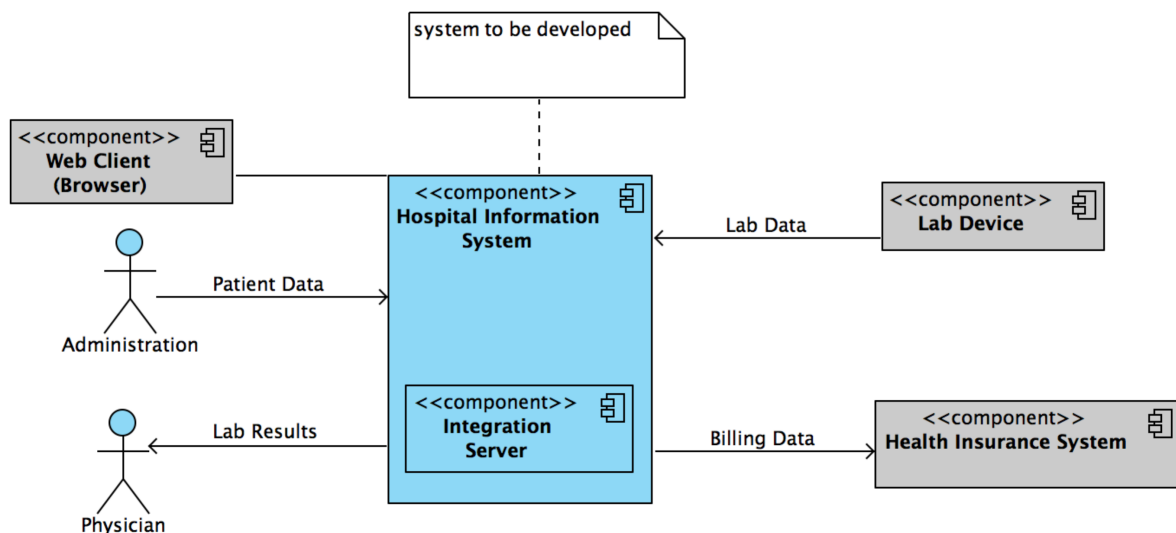

Fig. 1: UML System Context

**UML-type context diagram** - shows the birds eye view of the system (black box) described by this architecture within the ecosystem it is to be placed in. Shows orbit level interfaces on the user interaction and component scope.

## 3.4 Conventions

We follow the coding guidelines:

---

**Todo:** Define what coding guideline they should use, if you differ from the ones below.

---

Table 1: Coding Guidelines

Language	Guideline	Tools
Python	<a href="https://www.python.org/dev/peps/pep-0008/">https://www.python.org/dev/peps/pep-0008/</a>	
C++	<a href="http://wiki.ros.org/CppStyleGuide">http://wiki.ros.org/CppStyleGuide</a>	clang-format: <a href="https://github.com/davetcoleman/roscpp_code_format">https://github.com/davetcoleman/roscpp_code_format</a>

## 3.5 Architecture Constraints

**Todo:** Describe what constraints someone further developing this software should adhere to, and why. Should they not use tool x or operating system y... You can use the table as below, or just put a list.

### 3.5.1 Technical Constraints / Runtime Interface Requirements

**Todo:** List all technical constraints in this section. This category covers runtime interface requirements and constraints such as:

- Hard- and software infrastructure
- Applied technologies - Operating systems - Middleware - Databases - Programming languages

Table 2: Hardware Constraints

Constraint Name	Description
Altera FPGA	All code is highly specific to the Altera FPGA. Intel has bought Altera and aims to integrate their SoC with FPGAs. We are on the right horse!
Intel RealSense	Only the intel real sense can sense it..

Table 3: Software Constraints

Constraint Name	Description
Altera FPGA	All code is highly specific to the Altera FPGA. Intel has bought Altera and aims to integrate their SoC with FPGAs. We are on the right horse!
Intel RealSense	Only the intel real sense can sense it. . .

Table 4: Operating System Constraints

Constraint Name	Description
Windows 8 or higher	Due to the Intel RealSense SDK only being supported on Windows, we are stuck with Windows

Table 5: Programming Constraints

Constraint Name	Description
CouchDB	We have to use the CouchDB because the type of data we have to store changes at runtime. . .

## 3.6 Technical Interfaces

This section describes the data interfaces to other systems around it. It follows 3 of the [levels of interoperability \(IO\)](#):

---

**Todo:** For all your interfaces, define their first 3 [levels of interoperability](#). You can use your doxygen documented source code to i.e. show all members of a class. Find more on the [Breathe Documentation](#)

---

- Technical interoperability - Datastreams btwn systems. i.e. TCP/IP, RS232, ...
- Syntactic interoperability - Units within the stream. i.e. XML, CSV, HL7, DICOM
- Semantic interoperability - Common definition of unit meaning.

### 3.6.1 Powerlink for MotorControl

#### Technical IO

Powerlink

#### Syntactic IO

SDO, PDO, NMT messages

#### Semantic IO

The package names or registers or

```
class Nutshell
```

#### Public Types

```
enum Tool
```

Our tool set.

The various tools we can opt to use to crack this particular nut

*Values:*

```
kHammer = 0
```

What? It does the job.

```
kNutCrackers
```

Boring.

```
kNinjaThrowingStars
```

Stealthy.

#### Public Functions

```
Nutshell ()
```

*Nutshell* constructor.

**~Nutshell** ()

*Nutshell* destructor.

void **crack** (*Tool tool*)

Crack that shell with specified tool.

#### Parameters

- `tool`: - the tool with which to crack the nut

bool **isCracked** ()

**Return** Whether or not the nut is cracked

## 3.7 User Interfaces

How does a user interact with the system.

---

**Todo:** If you have a user interacting with the finished system, and especially if you have a UI or GUI, describe how it can be used. A good way of doing this, is by building a

- state transition diagram aka the ‘Dynamic UI Behaviour’ and
- a mockup/picture of every screen the user can see - aka ‘Static UI’

Don’t overdo it. . .

---

### 3.7.1 Dynamic UI Behaviour

### 3.7.2 Static UI

## 3.8 Design Decisions

This can document decisions on the design of the software.

---

**Todo:** If you want to use it, keep track of decisions that someone further developing this software or using it in the future might want to know about. This might save them time or clarify expectations. You can put them as a list, or whatever.

*Things to consider:*

- What exactly is the challenge?
- Why is it relevant for the architecture?
- What consequences does the decision have?
- Which constraints do you have to keep in mind?
- What factors influence the decision?
- Which assumption have you made?
- How can you check those assumptions?

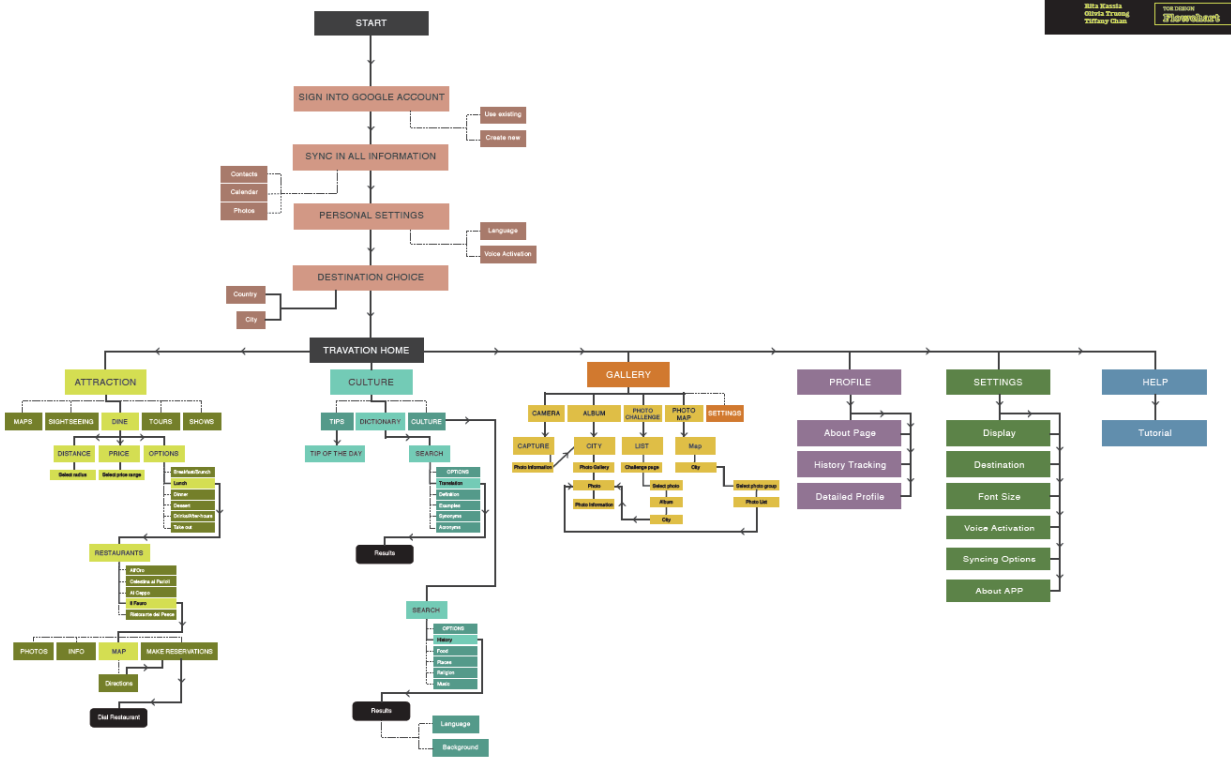

Fig. 2: Diagram showing the dynamic behaviour of the user interface i.e. State diagram

- Which risks are you facing?
- Which alternative options did you consider?
- How do you judge each one?
- Which alternatives are you excluding deliberately?
- Who (if not you) has decided?
- How has the decision been justified?
- When did you decide?

## 3.9 Public Interfaces

```
class Nutshell
```

### Public Types

```
enum Tool
```

Our tool set.

The various tools we can opt to use to crack this particular nut

*Values:*

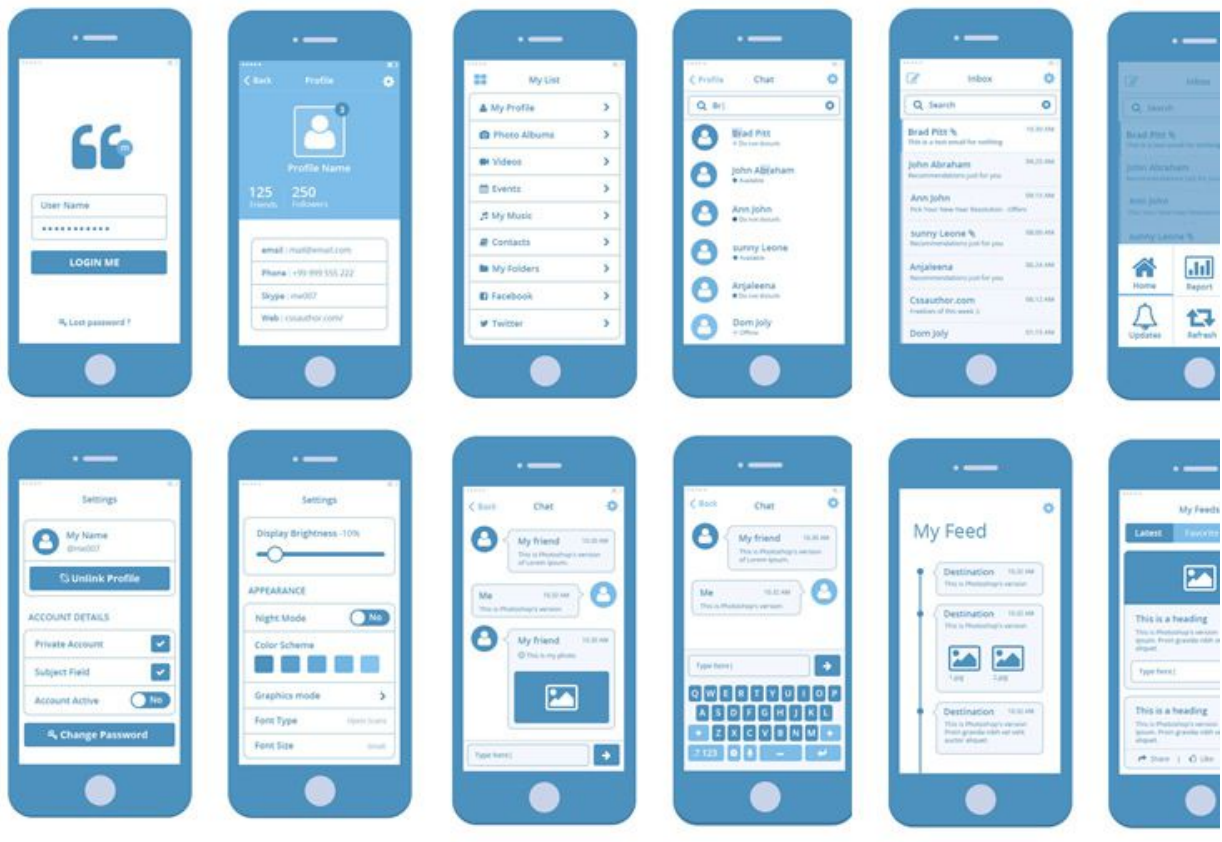

Fig. 3: Mock-up screens of the individual views/screens of the GUI i.e. Wireframes, whiteboard sketches

**kHammer** = 0  
What? It does the job.

**kNutCrackers**  
Boring.

**kNinjaThrowingStars**  
Stealthy.

## Public Functions

**Nutshell** ()  
*Nutshell* constructor.

**~Nutshell** ()  
*Nutshell* destructor.

void **crack** (*Tool tool*)  
Crack that shell with specified tool.

### Parameters

- *tool*: - the tool with which to crack the nut

bool **isCracked** ()  
**Return** Whether or not the nut is cracked

## Private Members

bool **m\_isCracked**  
Our cracked state.

*file nutshell.h*  
An overly extended example of how to use breathe.

## Enums

**enum** [anonymous]  
*Values:*

**YellowRoller**

**RedRoller**

**GreenRoller**

**enum** [anonymous]  
*Values:*

**Chocolate**

**Mossy**

**CremeFraiche**

*group* **nuttygroup**  
The group for all nutjobs.  
No nut can withstand us!

### Enums

**enum** [anonymous]  
*Values:*  
**YellowRoller**  
**RedRoller**  
**GreenRoller**

*group* **nuttygroup2**  
The group for all nutjobs.  
More documentation for the second group.

### Enums

**enum** [anonymous]  
*Values:*  
**Chocolate**  
**Mossy**  
**CremeFraiche**

*dir* /home/docs/checkouts/readthedocs.org/user\_builds/roboy-sw-documentation-template/checkou

## 3.10 Solution Strategy

---

**Todo:** Describe your solution strategy.

### Contents.

A short summary and explanation of the fundamental solution ideas and strategies.

### Motivation.

An architecture is often based upon some key solution ideas or strategies. These ideas should be familiar to everyone involved into the architecture.

### Form.

Diagrams and / or text, as appropriate. Keep it short, i.e. 1 or 2 pages at most!

---

## 3.11 Test Strategy

---

**Todo:** If you have any tests describe:

- Where the tests are kept.
  - How the tests are invoked.
  - What you can/need to test manually.
- 

### 3.11.1 System Tests

### 3.11.2 Integration Tests

### 3.11.3 Unit Tests

## 3.12 Building Block View

### 3.12.1 Overview

---

**Todo:** Inset a building block view:

- Static decomposition of the system into building blocks and the relationships thereof.
- Description of libraries and software used
- 

We specify the system based on the blackbox view from *UML System Context* by now considering it a whitebox and identifying the next layer of blackboxes inside it. We re-iterate this zoom-in until specific granularity is reached - 2 levels should be enough.

**Motivation.**

This is the most important view, that must be part of each architecture documentation. In building construction this would be the floor plan.

**Tool**

- Create diagrams as below.
- 

The white box view of the first level of your code. This is a white box view of your system as shown within the in Context in figure: *UML System Context*. External libraries and software are clearly marked.

### 3.12.2 Level 1 - Components

The highest level components

---

**Todo:**

- Define your groups using the **/defgroup** doxygen command
  - Add **@addtogroup** tags to doxygen blocks of components in code as described here: <http://www.stack.nl/~dimitri/doxygen/manual/grouping.html#modules>
  - Adapt the doxygencall to match the group name
-

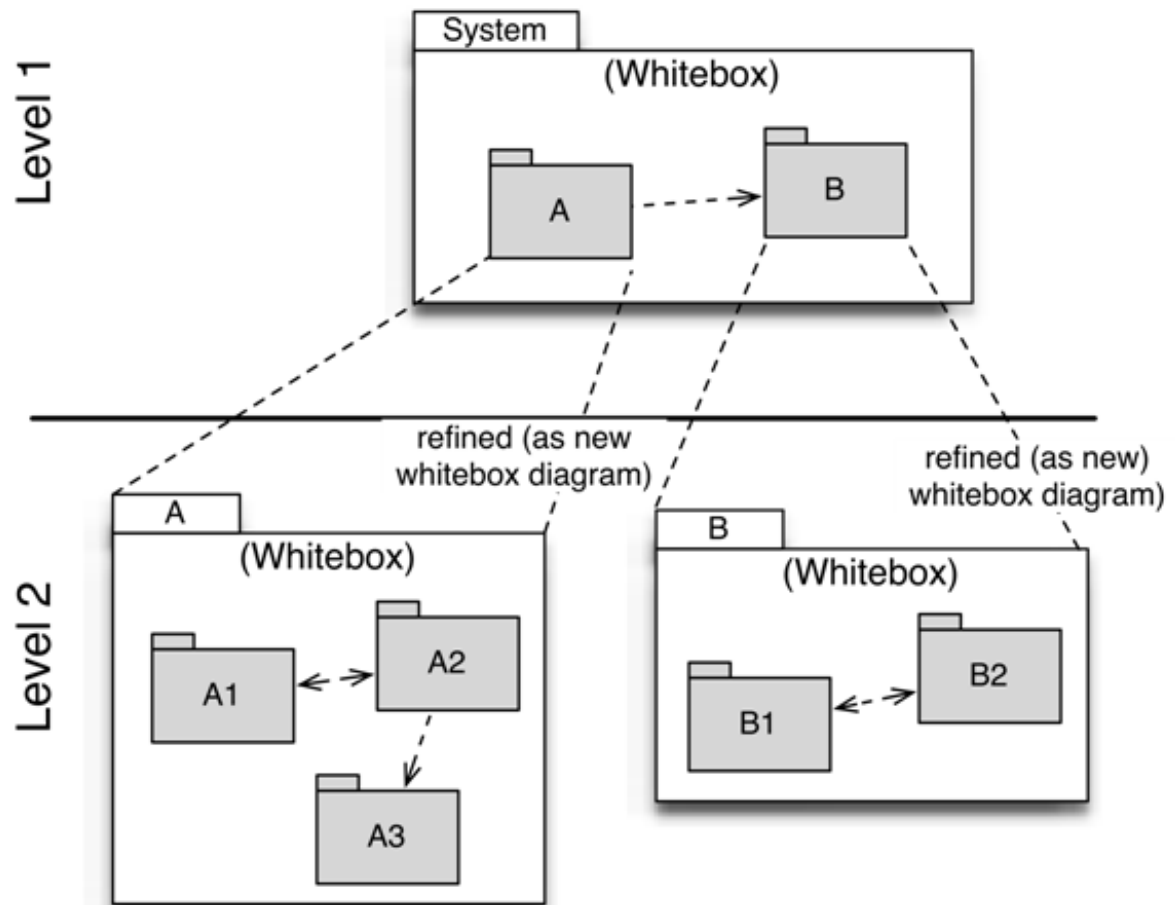

Fig. 4: Building blocks overview

*group* **nuttygroup**  
The group for all nutjobs.  
No nut can withstand us!

### Enums

**enum** [anonymous]  
*Values:*  
**YellowRoller**  
**RedRoller**  
**GreenRoller**

## 3.12.3 Level 2 - Components within each component of level 1

---

### Todo:

- Define your groups using the **/defgroup** doxygen command
  - Add **addtogroup** tags to doxygen blocks of components in code as described here: <http://www.stack.nl/~dimitri/doxygen/manual/grouping.html#modules>
  - Adapt the doxygencall to match the group name
- 

*group* **nuttygroup2**  
The group for all nutjobs.  
More documentation for the second group.

### Enums

**enum** [anonymous]  
*Values:*  
**Chocolate**  
**Mossy**  
**CremeFraiche**

## 3.13 Runtime View

---

**Todo:** Add a runtime view of i.e. the startup of your code. This should help people understand how your code operates and where to look if something is not working.

**Contents.** alternative terms: - Dynamic view - Process view - Workflow view This view describes the behavior and interaction of the system's building blocks as runtime elements (processes, tasks, activities, threads, ...).

Select interesting runtime scenarios such as:

- How are the most important use cases executed by the architectural building blocks?

- Which instances of architectural building blocks are created at runtime and how are they started, controlled, and stopped.
- How do the system's components co-operate with external and pre-existing components?
- How is the system started (covering e.g. required start scripts, dependencies on external systems, databases, communications systems, etc.)?

**Note**

The main criterion for the choice of possible scenarios (sequences, workflows) is their **architectural relevancy**. It is **not** important to describe a large number of scenarios. You should rather document a representative selection.

Candidates are:

1. The top 3 – 5 use cases
2. System startup
3. The system's behavior on its most important external interfaces
4. The system's behavior in the most important error situations

**Motivation.**

Especially for object-oriented architectures it is not sufficient to specify the building blocks with their interfaces, but also how instances of building blocks interact during runtime.

**Form.**

Document the chosen scenarios using UML sequence, activity or communications diagrams. Enumerated lists are sometimes feasible.

Using object diagrams you can depict snapshots of existing runtime objects as well as instantiated relationships. The UML allows to distinguish between active and passive objects.

---

### 3.13.1 Runtime Scenario 1

### 3.13.2 Runtime Scenario 2

...

## 3.14 Deployment View

---

**Todo:** Add a deployment diagram. **Contents.**

This view describes the environment within which the system is executed. It describes the geographic distribution of the system or the structure of the hardware components that execute the software. It documents workstations, processors, network topologies and channels, as well as other elements of the physical system environment.

**Motivation.**

Software is not much use without hardware. These models should enable the operator to properly install the software. You can separate this into different levels...

---

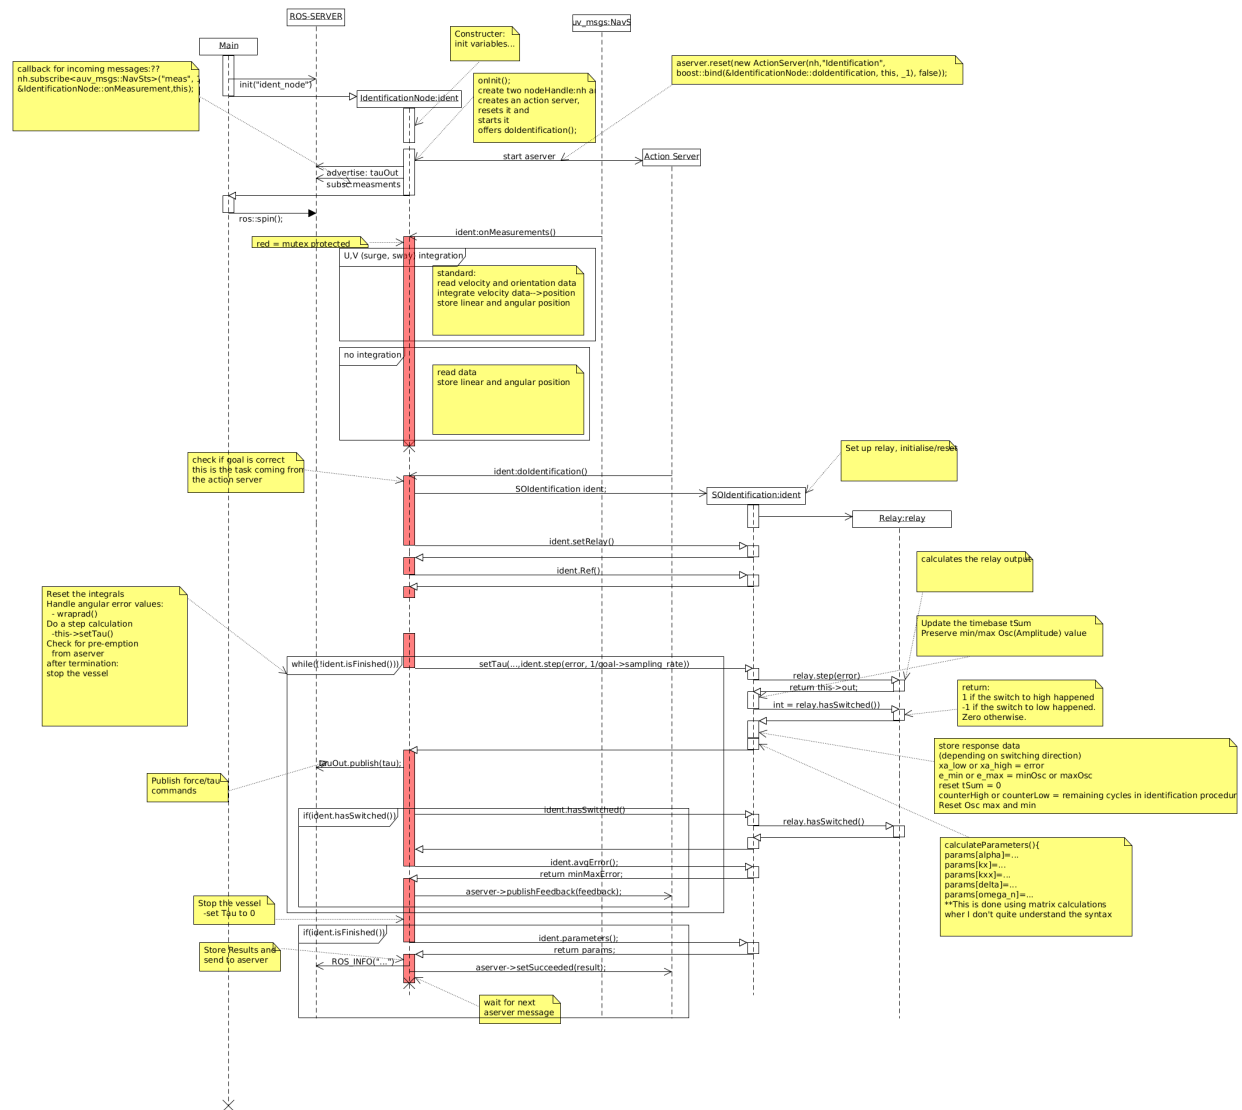

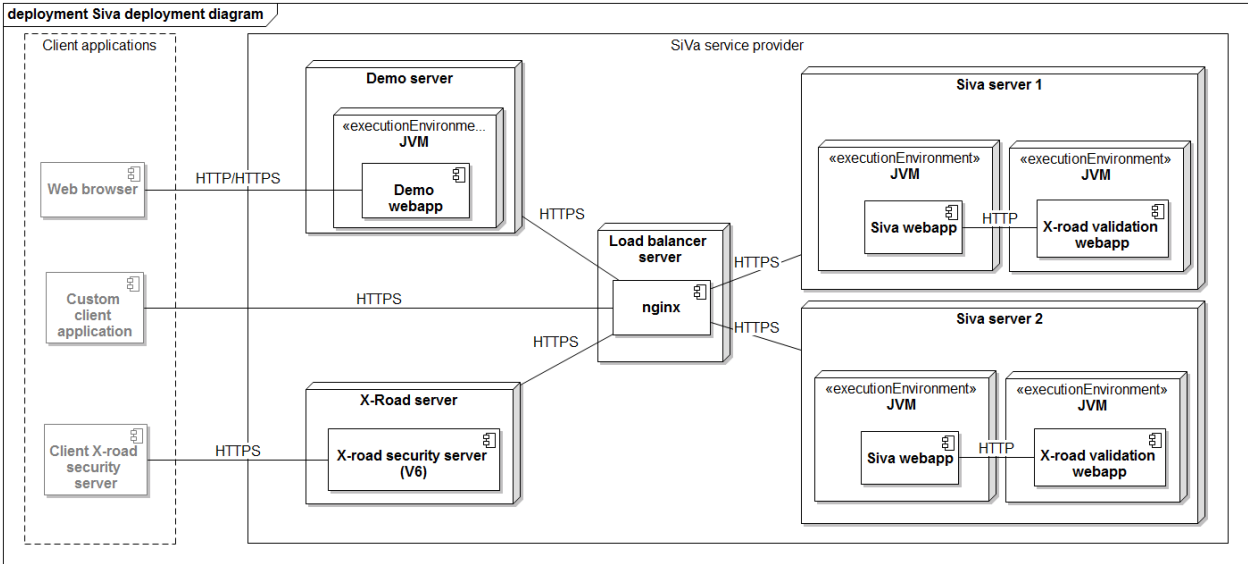

Fig. 5: UML-type sequence diagram - Shows how components interact with each other during runtime.

### 3.15 Libraries and external Software

Contains a list of the libraries and external software used by this system.

**Todo:** List libraries you are using

Table 6: Libraries and external Software

Name	URL/Author	License	Description
arc42	<a href="http://www.arc42.de/template/">http://www.arc42.de/template/</a>	Creative Commons Attribution license.	Template for documenting and developing software

### 3.16 About arc42

This information should stay in every repository as per their license: <http://www.arc42.de/template/licence.html>

arc42, the Template for documentation of software and system architecture.

By Dr. Gernot Starke, Dr. Peter Hruschka and contributors.

Template Revision: 6.5 EN (based on asciidoc), Juni 2014

© We acknowledge that this document uses material from the arc 42 architecture template, <http://www.arc42.de>. Created by Dr. Peter Hruschka & Dr. Gernot Starke. For additional contributors see <http://arc42.de/sonstiges/contributors.html>

#### Note

This version of the template contains some help and explanations. It is used for familiarization with arc42 and the understanding of the concepts. For documentation of your own system you use better the *plain* version.

### 3.16.1 Literature and references
